CAR LIFT

MORGAN ELLIS X TOTAL LIFTING SOLUTIONS

Morgan Ellis Lifts proudly partners with Total Lifting Solutions to deliver high-quality, bespoke car lift systems tailored to your needs.

UNDERGROUND CAR PARKING AT THE TOUCH OF A BUTTON

Our advanced car parking lifts provide a sleek and secure solution by storing vehicles underground. Ideal for modern homes or properties with space constraints, these lifts disappear seamlessly below ground when not in use, offering both convenience and aesthetic appeal, all operated effortlessly at the touch of a button.

DRIVEWAY TO BASEMENT CAR ACCESS

For clients with multiple vehicles or high-end properties, our driveway-to-basement lifts offer a smooth, reliable way to transport cars directly to secure basement parking. This eliminates the need for ramps or wide access roads, optimising space and enhancing the overall design of your property.

SPACE-SAVING CAR STACKING SYSTEMS

Perfect for car collectors or properties with limited parking, our car stacking systems are engineered to double or even triple your car storage capacity. Designed for both residential and commercial use, these systems make the most of vertical space while ensuring your vehicles are stored safely and accessibly.

BESPOKE TURNTABLES AND MULTI-LEVEL TRANSPORT

When space is tight or manoeuvring is tricky, such as on narrow driveways, in garages, or luxury showrooms, our vehicle turntables provide effortless 360° rotation. For commercial environments, we also offer robust floor-to-floor lifts to move vehicles between multiple levels of storage facilities or display areas with ease.
